# OMPS Metadata Discussion of Science Team Requirements

Peter Hall Thursday 12 March 2015

#### **Current Situation**

- OMPS data to be archived long term in GSFC DISC (Formerly DAAC)
- LP data to be archived from reprocessing V3.0 onwards
- NP/NM(TC) data to be archived from reprocesing V3.0 onwards
- IE. Current re-processings are not relevant for archival storage
- Need to begin preparing now for archival of future reprocessing(s)

### Requirements - Overview

- Processing Requirements (ACPS)
  - Filenames are 1<sup>st</sup> cut of metadata
- DISC (DAAC) Storage Requirements
  - Must sync with DISC archive requirements
- Science Team Requirements
- Recommended additions useful but not absolutely necesary
- Possible additions –
  parallel to other metadata, etc.

#### Science Team

- Science Team decides WHAT data is archived
  - Single most fundamental decision
- What do we actually want to archive?
  - What data is needed for long term research?
  - What data will be needed in 5/10/20+ years?
  - Err on the side of more rather than less
- Storage space is available
- Measure in terms of HDF5 data files

#### What Files for Archival – L0/L1?

- L0 Do we archive at all?
  - Defer until later
- L1 Most choice
  - L1A Do we archive at all?
  - L1B which ?
  - L1G Best candidate for archival
  - L1ANC Ancillary data Do we archive ?
  - L1CAL Calibration data Do we archive ?

#### What Files for Archival - L2/L3?

- L2 -
  - Orbital Definitely archive
  - Daily Do we archive ?
- L3 One file only currently
  - NMTO3-L3-DAILY
  - What do we expect in future

## **Key Question**

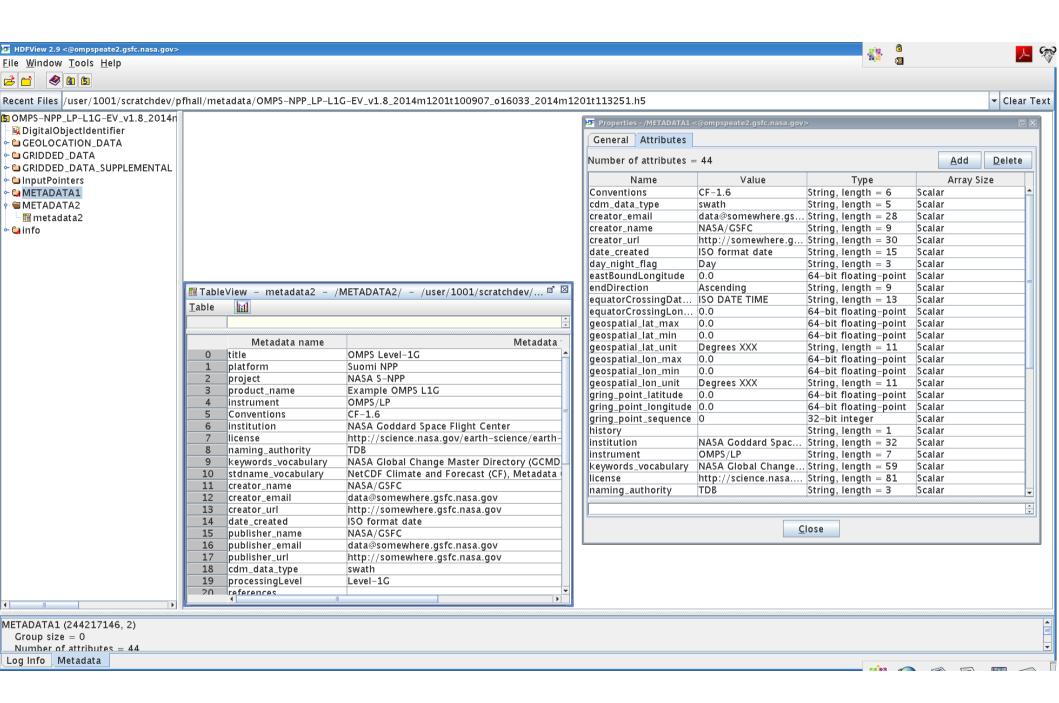

In 20 years time (2035!) what files will I need to do my research?

## Spreadsheet of relevant files

#### File Level Metadata

- Need to decide file types first
- ACPS and DISC (DAAC) decided for us
- What are the science team requirements?
- Everything held in HDF5 files:
  - Data objects/Attributes currently in use
  - User Block(s) some issues
- Simple Python calls
  - Other languages ?
  - Can write post-processor App

#### Science Metadata Inclusion

- Instrument
- Calibration
- Science Data
- Tables
  - Whole table ?
  - Reference to table ?

#### Metadata Checkers

- Currently available tools
- EOSDIS
- CF NETCDF
- AppCheck in house customizable
- ISO Standards
